## Purpose-Built Digital Quality Management for Pharma Air Cargo

AirQMS by PharmaGDP | Purpose-built for pharma air cargo | CEIV- and GDP-aligned

### Description

AirQMS is a digital quality management platform built specifically for healthcare and pharmaceutical operations in air cargo. Designed by quality professionals for operational teams, it helps airlines, ground handlers, freight forwarders, trucking companies, and cargo terminals move from fragmented tools and manual tracking to structured, risk-based, audit-ready quality management — aligned with IATA CEIV Pharma and GDP expectations.

### Why AirQMS

#### Purpose-built for air cargo

Not a generic QMS adapted to logistics. AirQMS is designed around the real operational complexity of pharma air logistics, with strong alignment to CEIV Pharma and GDP expectations.

#### Global governance, local execution

Stations own their records, actions, and CAPAs. HQ and regional teams gain visibility, oversight, and cross-site comparison — without taking ownership away from the people who do the work.

#### Operationally relevant

Process-driven, not document-driven. AirQMS moves quality from compliance tracking to continuous improvement, with risk-based thinking and AI-supported tools embedded across the platform.

Turn CEIV and GDP expectations into daily operational control — across every station.

### Who It's For

- **Carriers & airlines** — Network-wide oversight of outsourced handlers and station consistency.
- **Ground handlers** — Station-level execution, training discipline, and audit readiness.
- **Freight forwarders** — End-to-end visibility, subcontractor oversight, and exception control.
- **Trucking companies** — Mapped equipment, route discipline, and excursion management.
- **Cargo terminals & airport communities** — Coordinated pharma capability and shared standards.

### Core Capabilities

- Deviation, CAPA, and change management
- AI-supported risk management (FMEA)
- Audit management and smart checklists
- Training and competency management
- Supplier and service-provider qualification
- Document control and KPI dashboards
- Temperature mapping and qualification support
- AI-supported RCA and SIPOC drafting

### Built for How Air Cargo Really Works

Multi-tenant SaaS on AWS, with tenant isolation, role-based access, SSO/MFA, immutable audit trails, e-signatures, and encryption at rest and in transit. Modular, multilingual, and scalable — deploy a single station or roll out across entire networks, in waves from pilot to full deployment.
